EDUCATION

College of Engineering and Technology

Bachelor of Technology in Electronics and Communication Engineering

Udaipur, Rajasthan

2021 – 2025

EXPERIENCE

Software Engineer Intern

Feb 2026 – May 2026

SparxIT Solutions

- Developed features for a microservices-based multi-vendor eCommerce platform built on a scalable, modular architecture.
- Built responsive frontends with Next.js and integrated them with Node.js, Express.js, and MongoDB backend services.
- Implemented asynchronous service-to-service communication with RabbitMQ, decoupling workloads and improving reliability.
- Instrumented services with Winston and Morgan for structured logging and request monitoring, speeding up production debugging.
- Designed and consumed REST APIs and partnered with cross-functional teams to optimize performance and service integration.

Full Stack Intern

Jul 2025 – Dec 2025

Modern Tech Creations

- Developed a Restaurant ERP system that streamlined daily operations and improved workflow efficiency for staff.
- Built core modules including Menu Management and Billing using React.js, Node.js, Express.js, and MongoDB.
- Designed a responsive, modern user interface with Tailwind CSS and Shadcn/UI for a consistent experience across devices.
- Configured CI/CD pipelines with GitHub Actions to automate builds and deployments, reducing manual release effort.

PROJECTS

Multi-Tenant E-Commerce SaaS | Next.js, TypeScript, Node.js, Express, MongoDB, Razorpay

Jun 2026 – Present

- Building a SaaS platform that onboards merchants and gives each one a customer-facing storefront plus a 20+ module admin dashboard covering catalog, inventory, orders, payments, promotions, and analytics.
- Designed inventory as the single source of truth across multiple warehouses with no cached stock counts; availability is computed live and a reason-coded activation state machine keeps rows consistent through product, variant, and warehouse delete, restore, and pause cascades.
- Implemented reservation-based checkout with idempotency keys, cart snapshot reconciliation, and transactional stock and movement writes to prevent overselling and duplicate orders on client retries.
- Built policy-driven RBAC over JWT access and refresh sessions, a transactional outbox for reliable event delivery, and lease-based leader election so scheduled jobs run exactly once across multiple instances.
- Integrated Razorpay payments, GST-compliant tax splitting, refunds and returns, discounts, gift cards, and wallets, plus a Gemini-powered product enrichment flow that generates catalog content using structured JSON output grounded to real categories.

ChatConnect | React.js, Node.js, Express.js, MongoDB, Socket.IO, WebRTC, JWT

- Built a full-stack real-time messaging platform with one-on-one and group chats, using Socket.IO for live delivery, typing indicators, and read/unread state that accurately reflects whether a recipient has the conversation open.
- Implemented peer-to-peer WebRTC audio and video calling with a custom Socket.IO signaling layer covering the full call lifecycle — ringing, accept/reject, busy/misssed detection, and call history logging.
- Designed OTP-based phone authentication with httpOnly JWT cookie sessions and a WhatsApp-style contact model that creates relationships implicitly on first message rather than a manual add step.
- Structured the backend into a layered routes/controllers/services architecture and virtualized list rendering on the client for consistent performance as chat and message volume grows.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, SQL, HTML/CSS

Frameworks: React.js, Next.js, Node.js, Express.js, Redux Toolkit, Tailwind CSS, Shadcn/UI, Socket.IO

Databases & Messaging: MongoDB, Mongoose, PostgreSQL, MySQL, Redis, RabbitMQ, Apache Kafka

Developer Tools: Git, GitHub Actions (CI/CD), Docker, Vercel, Postman, VS Code

Concepts: REST API Design, Microservices, Multi-Tenant SaaS, JWT Authentication, RBAC, Event-Driven Architecture, OOP, Data Structures and Algorithms, Agile
